

Aim for $+12V/7.66A$

$$\rightarrow 240mA + 150mA + 56mA + 30mA = 475mA / 0.475A = \text{Total Current Draw}$$

$$\rightarrow \text{Total Power Consumption} = 3.3 \cdot 0.475 = 1.5675W$$

$$\rightarrow \text{Input Current} = \frac{1.5675}{12} = 0.13A$$

From $+12V$
